

Brush Strips Sealing Systems

Brush Strips are designed for many applications within the data center, typical used to close any holes within the raised floor to prevent cold air escaping and mixing with the hot air. They are available up to 3 metre in lengths.

The standard range of Brushstrip consists of six brush section sizes with over forty trim lengths from 8mm to 300mm, all available with or without aluminium fixing carrier. All standard sections are filled with Type 6 black nylon, a hard wearing material with excellent recovery properties well able to cope with temperature variations from -40C up to 100C.

Each corresponding aluminium fixing carrier is available with the fixing flange set at 180, 90 or 45 degrees. All brushstrip and aluminium sections are stocked in 2.0 meter, 2.5 meter and 3.0 meter lengths. Non standard lengths are also available.

Standard Materials

Filaments - Extruded from type 6 nylon • Hard wearing • Good memory • Working temperature range: - 40°C to +100°C.

Metal Backing - Electro Galvanised Steel.

Core Wire - Electro Galvanised Steel.

Fixing Carrier - Mill Finish Extruded Aluminium in 180°, 90° and 45° flanges
