

# Circular Floor Grommets

**The circular floor grommets are designed to close any circular cable exit from the raised floor. They are available either surface mount for existing environments or integral for new installations**

Energy Efficient The circular surface-mount cable seal consists of a single brush spiral and a holder. The geometry of the brush provides an intrinsically more efficient seal, completely surrounding the cables. Additionally, polygonal filaments are used which nest and interlock to provide a more effective brush seal than brushes constructed with ordinary round filaments

The AJ series include a single-piece holder for new installations where cables have not yet been installed. The surface-mount cable seals come with a two-piece holder enabling installation around existing cable. For enhanced security a version can be supplied with a 2 in long PVC pipe to provide edge protection (EP).

Available in 2 sizes to cover the maximum hole diameters of 114mm and 171mm (4.5" and 6.75") surface and integral versions.
